

B420 AC HL product enhancements makes it Bendi's flagship model

With more than 20 customer-driven enhancements and an official launch scheduled for the IMHX show in November, Translift Bendi's B420 AC HL (High-Lift) truck is set to become the company's new flagship model.

Bendi B420HL has been completely re-shaped to offer improved performance and driver comfort.

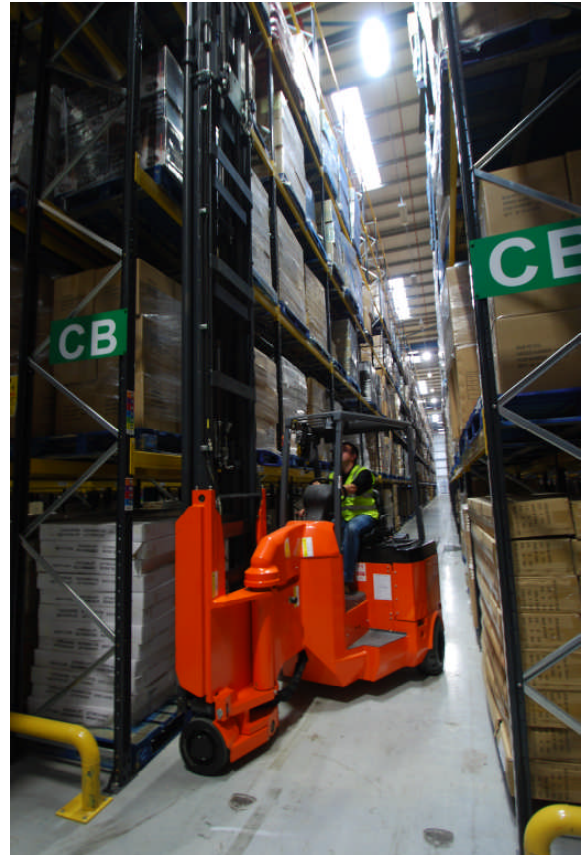

Designed to give optimal aisle performance and greater space-saving over conventional counterbalance and reach trucks, the Bendi has been completely re-shaped to offer improved performance and driver comfort.

Having successfully taken the original Bendi B420 model to new heights with the B420 AC, Brown is particularly enthusiastic with the results and has replicated these changes onto the Flagship High Lift: "Our engineering know-how in tandem with input through client feedback has transformed the 420 AC model and, as a result, we've also been able to incorporate those enhancements into our market leading B420 AC HL High Lift."

"The push for ever greater height in articulated forklifts is ongoing, and through innovative reengineering we've been able to add 10% residual capacity to the 420 AC HL whilst providing improved Battery swap overs for double shift applications," explains Simon Brown, Managing Director for Translift Bendi. "Meanwhile, by updating the steer and lift motors with a more powerful & controlled unit, the speed and energy efficiency has been increased by 20% whilst reducing operating noise significantly.

“Maintenance downtime is inevitable and can be costly,” continued Brown. “We’ve reduced this by a staggering 60% by making it easier to gain access to the truck’s components. Meanwhile, a more appealing driver environment has been achieved with an increased leg and headroom, in addition to a multi-position adjustable steering column and armrest. But the biggest single area of improvement has been the swap to AC to align it with the rest of the range. This added power transforms the drive and lift speeds.”

From aisle performance which has improved by 100mm due to fitting of 220 rotation and safety improvements through to ergonomic design and superior engineering, the B420 HL AC multi-purpose articulated forklift truck has also retained many of the original features preserving its status at the helm of the Bendi range.
